AMENDMENTS TO THE CLAIMS:

1. (currently amended): A heat dissipation module, comprising:

a fan having <u>a rotor and</u> a shaft with a first end and an opposite second end, the first end of the shaft penetrating a hub of the [[fan]] <u>rotor</u> and <u>connecting being</u> <u>physically in contact with [[to]] a heating heat-generating element, wherein the rotor is rotabaly connected with the shaft; and</u>

a heat sink connected to the second end of the shaft;

wherein the shaft is a heat pipe, and the fan is disposed between the heat sink and the heating heat-generating element.

2-3. (cancelled)

- 4. (withdrawn): The heat dissipation module according to claim 1, further comprising a base mounted on the heating element, and the shaft is fixed on the base to connect to the heating element.
- 5. (withdrawn): The heat dissipation module according to claim 4, wherein the base is formed with a plurality of teeth circularly arranged on its surface, and a gap is formed between two adjacent teeth.
- 6. (withdrawn): The heat dissipation module according to claim 5, wherein the teeth are made from materials with high thermal conductivity.
- 7. (withdrawn): The heat dissipation module according to claim 4, wherein the base is

formed with a plurality of bumps on its surface.

8. (withdrawn): The heat dissipation module according to claim 7, wherein the bumps

are made from materials with high thermal conductivity.

9. (withdrawn): The heat dissipation module according to claim 4, wherein the base is

formed with an opening, and the shaft is inserted into the opening to fix on the base.

10. (currently amended): A heat dissipation module, comprising:

a heat pipe having a first end and an opposite second end, the first end of the heat

pipe being eonnected physically in contact with [[to]] a heating heat-generating

element;

a stator assembly fixed on the heat pipe;

a rotor rotatably connected to the heat pipe; and

a heat sink connected to the second end of the heat pipe.

11. (cancelled)

12. (currently amended): The heat dissipation module according to claim 10, wherein

the materials of the heat pipe is made from materials [[are]] selected from the group

consisting of aluminum, copper, aluminum alloy, copper alloy and compounds thereof.

13. (previously presented): The heat dissipation module according to claim 10,

wherein the rotor is made from materials selected from the group consisting of

aluminum, copper, aluminum alloy, copper alloy and compounds thereof.

3

Reply to Office Action dated October 8, 2008

14. (currently amended): The heat dissipation module according to claim 10, wherein

the first end of the shaft is formed with an enlarged portion to increase an area in

contact with the heating heat-generating element.

15. (withdrawn): The heat dissipation module according to claim 10, further

comprising a base mounted on the heating element.

16. (withdrawn): The heat dissipation module according to claim 15, wherein the base

is interposed between the shaft and the heating element, and the shaft is fixed on the

base to connect to the heating element.

17. (withdrawn): The heat dissipation module according to claim 15, wherein the shaft

penetrates the base and touches the heating element.

18. (withdrawn): The heat dissipation module according to claim 15, wherein the base

is formed with a plurality of teeth circularly arranged on its surface, and a gap is

formed between two adjacent teeth.

19. (withdrawn): The heat dissipation module according to claim 18, wherein the

shape of the teeth conforms to a flow channel design.

20. (withdrawn): The heat dissipation module according to claim 15, wherein the base

is formed with a plurality of bumps on its surface.

21. (currently amended): A heat dissipation module, comprising:

a fan having a rotor and a shaft with a first end and an opposite second end, the

first end of the shaft penetrating a hub of the [[fan]] rotor and being physically in

contact with connecting to a heating heat-generating element; and

a heat sink connected to the second end of the shaft;

wherein the fan is disposed between the heat sink and the heating heat-generating

element, and wherein the materials of the shaft [[are]] is made from materials

selected from the group consisting of aluminum, copper, aluminum alloy, copper alloy

and compounds thereof.

22. (currently amended): The heat dissipation module according to claim 1, wherein

the fan comprises a stator assembly and a rotor, the rotor being [[is]] rotatably

connected to the shaft.

23. (currently amended): The heat dissipation module according to claim 21, wherein

the fan comprises a stator assembly and a rotor, the rotor being [[is]] rotatably

connected to the shaft.

24. (currently amended): The heat dissipation module according to claim 10, wherein

the shaft stator assembly is disposed between the heat sink and the heating

heat-generating element.

25. (currently amended): The heat dissipation module according to claim 10, wherein

the rotor is disposed between the heat sink and the heating heat-generating element.

5

- 26. (new): The heat dissipation module according to claim 10, wherein the rotor comprises a hub and a plurality of blades disposed radially around the hub.
- 27. (new): The heat dissipation module according to claim 10, wherein the rotor comprises a plurality of blades disposed radially around the stator assembly.
- 28. (new): The heat dissipation module according to claim 23, wherein the rotor comprises a plurality of blades disposed radially around the stator assembly.
